Product Description**

The Daily Trading Strategy component is designed to be a proprietary trading idea centre for gold traders with different approaches, although focusing on short-term timeframes.

Our Trading Strategies have a proven track record (*), and are designed as an improved successor of the successful Goldessential Livetrades, now incorporating a unique risk management tool on the issued trading ideas.

The proposed strategies are based on a combination of various methods of analysis, including our leading technical analysis for entry & exit points, market feeling and application of our sound risk assessment monitor.

The publication furthermore makes a distinction between several categories (medium risk, opportunistic short-term trades, etc.), to come forward to different trading approaches.

The underlying value for these strategies is the benchmark COMEX (CME) gold futures contract, for price-uniformity in contrast to spot markets, as well as for the specific futures market characteristics that these strategies can rely on.

Note: In the current stadium, daily trading strategies are geared towards a medium to high risk acceptance and short-term, although are in later phases planned to also cover lower risk, longer term strategies.

Please note that trading gold futures carries a high degree of risk and may result in significant losses. Goldessential, its representatives and subsidiaries can never be held responsible for any losses that might occur from the issued trading strategies.

(*) A detailed P&L statement for 2009 can be provided upon request.
